

MICHIGAN NAAQS ATTAINMENT STATUS

Attainment Areas:

The entire State of Michigan is currently designated “Attainment” with the National Ambient Air Quality Standards (NAAQS) for:

- ♦ Carbon Monoxide [CO]
- ♦ Nitrogen Dioxide [NO₂]
- ♦ Ozone [O₃]
- ♦ Sulfur Dioxide [SO₂]
- ♦ Particulate Matter Less Than 10 Microns [PM₁₀]

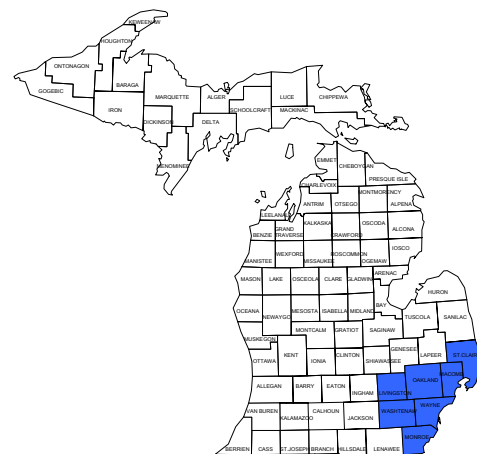

Nonattainment Areas:

♦ Annual and 24-hour PM_{2.5} (fine particles)

DEQ has requested that EPA redesignate area to Attainment.

Detroit Metropolitan Area

- Livingston
- Macomb
- Monroe
- Oakland
- St. Clair
- Washtenaw
- Wayne

* Note that **compliance** and **attainment** are two separate issues. All Michigan counties meet (are in compliance with) current PM_{2.5} Standards; but the EPA has not yet changed the attainment status. A single Wayne County monitor – located in an area heavily impacted by highway and industrial emissions – did not meet PM_{2.5} NAAQS until 2010.

♦ Lead [Pb]

All Michigan Counties meet the Lead (Pb) National Ambient Air Quality Standards except for a small area in Ionia County (less than 1 square mile in Belding).
